

Rip'd from [Micromatic.com](http://Micromatic.com)

These keg dimensions will help you determine what size refrigerator you will need to create a home kegerator.

AKA	Corny Keg		Pony Keg		Full Size Keg
Gallons	5.00	5.16	7.75	7.75	15.50
Ounces	640	661	992	992	1984
# of 12oz. beers	53	55	82	82	165
Weight (Full)	49 Pounds	58 Pounds	87 Pounds	87 Pounds	161 Pounds

These dimensions and weights may vary slightly as result of differences between keg manufacturers.

The Quarter Keg (Pony Keg) is also used in two variations that are the same capacity but have the slightly larger 17" diameter.

These are the rubber sided version (used by Miller Brewing Company) and the bulged non-straight wall version (used by Coors Brewing Company).

Availability of each size of keg will vary by brand of beer and location. You should inquire with your beer supplier to find out which brands of draft beer are available in your area for immediate pick-up, which ones need to be special ordered, and in which size keg those particular brands are available.

When inquiring with your local draft beer supplier, keep in mind that they usually only stock the most popular brands of beer and keg sizes. But local draft beer suppliers usually get deliveries from the beer distributors or breweries once per week. If the brand or keg size you are interested in is available, and if given a few days notice, they are usually happy to add it to their next delivery.

It is very important not to kink the beer hose as it leaves the coupler, this will restrict flow and cause foaming.

Keg Coupler with Beer Hose

Keg Coupler with Elbow Fitting

Low Profile Keg Coupler

In general, at least 5" to 6" of clearance needs to be allowed above the keg for the keg coupler and beer hose.

If you have limited space, an elbow fitting can be used to reduce the clearance to 4".

In applications where there is hardly any clearance available, a low profile keg coupler that requires only 1" above the keg can be used.
